A PACKET UNLIKE ANY **OTHER**

GrowPax is Unique

Remove oxygen to prevent terpene, THC and CBD loss. Stop mold and microbial growth. Regulate moisture to keep water activity of dried flower consistent. GrowPax was specifically formulated for cannabis and is the only product on the market with the ability to properly regulate humidity while removing oxygen.

In a recent 5 month study, yeast and mold growth was decreased by 187%*.

Properly formulated, scientifically proven, and thoroughly tested, GrowPax helps extend shelf-life while ensuring the quality of dried flower products.

THE BENEFITS

Protecting against oxygen

- Removing oxygen means product is kept consistent for extended periods of time.

Keeping water activity right

- Uniquely keeping the water activity of dried flower consistent regardless of the environment.

Irreversible chemical reaction

- Unlike physical reactions of humidity control packets, GrowPax is an irreversible chemical reaction.

The right size for optimal performance

- Available in 1g, 2g, and 4g packets.
8g coming soon.

GrowPax Is Unique

GrowPax is different compared to other products that control humidity on the market. They require a different degree of care and handling. Our product removes oxygen to prevent terpene, THC and CBD loss. It stops mold and microbial growth, while regulating moisture to keep water activity of dried flower consistent.

GrowPax is specifically formulated for cannabis and is the only product in the market with the ability to properly regulate humidity, while removing oxygen. Properly formulated, scientifically proven and thoroughly tested, GrowPax helps extend shelf-life while retaining the quality of dried flower products.

The Benefits

- Protecting against Oxygen.
- Removing oxygen means product is kept fresh for extended periods of time.
- Keeping water activity right.
- Uniquely keeping the water activity of dried flower consistent regardless of the environment.
- Irreversible chemical reaction.
- Unlike physical reactions of humidity control packets, GrowPax is an irreversible chemical reaction.

Product Handling Instructions

GrowPax absorbs oxygen and this chemical reaction is irreversible. Because of this, they can only be exposed to the atmosphere prior to insertion for less than two hours.

These packets have a finite capacity for oxygen absorption (see reverse side). After two hours of exposure, discard unused packets or follow the below instructions to reseal the pouch.

Opening the Pouch:

Carefully cut open the corner of the pouch, leaving enough room for the package to be resealed.

Remove Packets:

Remove only enough packets that can be placed and sealed into the final package within an hour, depending on the atmosphere in the room.

Remove Excess Air:

Remove as much air as possible from the package if you intend to reseal it. This is best accomplished with a high-temp vacuum sealer.

Reseal the Pouch:

Reseal the pouch with a high temperature sealer once air has been removed. This will protect unused product. Excessive opening and sealing of pouches is discouraged as product may activate and run out of capacity.
